PROFILE

Senior software engineer with more than a decade of experience building, modernizing, and supporting data-heavy business software. I work across C#/.NET applications, SQL Server, React and Angular interfaces, Azure integrations, and the conversations that turn unclear needs into reliable systems.

CORE EXPERTISE

DATABASE ENGINEERING	APPLICATION SYSTEMS	DELIVERY & COMMUNICATION
SQL Server, stored procedures, index and query tuning, Dapper, Entity Framework Core	C#, .NET, ASP.NET, REST APIs, React, Angular, TypeScript, identity and SSO	Requirements discovery, customer communication, technical translation, mentoring, production support

EXPERIENCE

PrismHR | Senior Software Engineer

September 2023 - Present | Multi-tenant human capital management software

- Build features and resolve production defects in layered C#/.NET applications spanning contract, repository, provider, and API controller layers.
- Develop integrations between PrismHR Talent Management and other PrismHR applications using Azure Service Bus.
- Design and optimize SQL Server queries, stored procedures, indexes, tables, and functions using Dapper and Entity Framework Core, including major data-cleanup efforts.
- Led the integration of Talent Management onboarding with PrismOne ID single sign-on and contributed to secure identity-server configuration and authorization scopes.
- Test application behavior with xUnit, Moq, NSubstitute, Bruno API collections, and Playwright browser automation.
- Use Azure DevOps and Jira for backlog refinement, estimation, sprint planning, and delivery tracking.
- Deliver Angular and TypeScript bug fixes and focused interface improvements alongside backend work.
- Build Talent Management and Workforce Management features while meeting strict security and privacy requirements for sensitive HCM data.
- Collaborate with enterprise architects and technical leads to align features with established SDLC and architecture standards.
- Engineer event-driven integrations that synchronize employee changes and timesheet data across HCM and workforce-management products using Azure Service Bus, Azure Functions, RabbitMQ, and C# webhooks.
- Help modernize legacy workforce-management services from .NET Framework 4 to .NET 8 using dependency injection and contemporary data-access patterns.
- Apply factory, unit-of-work, and repository patterns to keep services testable and maintainable across legacy and modernized codebases.
- Configure Duende IdentityServer clients and scopes to support secure authentication and authorization across the platform.

EXPERIENCE CONTINUED

American Airlines | Senior Web Developer/Team Lead

September 2017 - September 2023 | Enterprise recruiting, union, and operations applications

- Served as team lead and lead developer for a high-priority, greenfield applicant-tracking system built with React, ASP.NET, and SQL Server, from initial design through production deployment.
- Provided day-to-day direction to software engineers, assigned work, communicated project status, and mentored team members through one-on-ones and feedback.
- Established team objectives and tracked delivery indicators such as sprint throughput and deployment frequency.
- Partnered with project managers and business stakeholders to shape release plans and make project-level technical decisions.
- Created, maintained, and tested disaster-recovery and business-continuity plans that were successfully executed during three live business-critical events.
- Guided updates to union websites required by a new joint collective bargaining agreement while protecting sensitive employee data.
- Led the migration of three legacy web applications from on-premises infrastructure to Azure App Service, SQL Managed Instance, and Azure Data Factory.
- Secured API authentication and authorization flows using PingFederate and JWT tokens.
- Conducted more than 30 technical interviews and helped make hiring decisions for eight developers.
- Designed and maintained SQL Server databases, stored procedures, triggers, and views that automated critical workflows, including randomized employee selection for drug and alcohol testing.
- Supported production applications built with C#, VB.NET, Blazor, Web Forms, and MVC on the Employee Shared Technology team.

EARLIER EXPERIENCE

MWA Intelligence | Director of Technical Support

October 2015 - September 2017 | ERP implementation, SQL reporting, production support, and people leadership

- Built and managed a seven-person team supporting fourteen production clients; established one-on-ones, team meetings, and service KPIs.
- Wrote and maintained SQL reports for SAP Business One clients, translating business and support requirements into reusable reporting outputs.
- Created a revenue-recognition module for SAP Business One to support deferred-revenue analysis for multimillion-dollar organizations.
- Partnered with the implementation team on SAP Business One configuration, user training, and feature development.
- Established repeatable support practices that made case ownership and service performance easier to track across the client portfolio.

EDUCATION

Boston University

MS, Computer Information Systems
Data Analytics emphasis | 2017-2019

Arizona State University

BS, Accountancy
Chinese Language minor | 2009-2015

TECHNICAL TOOLKIT

LANGUAGES & FRAMEWORKS

C#, .NET, ASP.NET, React, Angular, TypeScript

DATA

SQL Server, stored procedures, query plans, indexes, Dapper, Entity Framework Core

CLOUD & INTEGRATION

Microsoft Azure, Azure Functions, Azure Service Bus, Azure Data Factory, RabbitMQ, REST APIs, webhooks

QUALITY & DELIVERY

xUnit, Moq, NSubstitute, Playwright, Bruno, Git, Azure DevOps, Jira, SDLC
