Richland, WA

Experience

PrismHR | *September 2023 – Present* | **Senior Software Engineer**

- Used C# 10/.NET 14 with a layered architecture (Contracts, Repository, Provider, Controller) to create features and resolve defects in a multi-tenant HR SaaS platform called PrismHR Talent Management (TM).
- Developed integration between PrismHR Talent Management and PrismHR applications utilizing Azure Service Bus.
- Used various database connection technologies, especially Dapper, to create SQL queries, stored procedures, tables, and functions. Included query optimization, refactoring, and major data cleanup efforts.
- Led integration development between Prism Talent Management's Onboarding module and PrismOne ID Single Sign On (SSO).
- Used various tools for testing, including NSubstitute, Bruno API collections, and Playwright automated front-end testing.
- Used Azure DevOps and Jira to track stories, including backlog grooming, story pointing, and work tracking.
- Utilized various AI tools including GitHub Copilot, Claude Code, and ChatGPT Codex to aid development efforts, including prompt engineering, agents, skills, tasks, etc. to enhance development.
- Angular/TypeScript development, including bug fixes and minor UI modification.
- Designed and developed robust Talent Management (TM) and Work Force Management (WFM) applications, ensuring strict adherence to PII information security requirements for sensitive Human Capital Management (HCM) data.
- Collaborated closely with enterprise architects and technical supervisors to ensure all development and feature enhancements strictly adhered to established SDLC processes and architectural guidelines.
- Engineered integrations between Prism HCM and Prism WFM utilizing Azure Service Bus, RabbitMQ, and C# webhooks to seamlessly sync employee changes and timesheet information.
- Led the modernization and upgrade of legacy WFM projects from .NET 4 to .NET Core 8, implementing C# .NET features such as Entity Framework Core and Dependency Injection.
- Maintained code quality and system stability by utilizing Factory/Unit of Work/Repository design patterns and writing comprehensive unit/API tests using Xunit, Moq, and NSubstitute.
- Configured and utilized Duende identity server and scopes to manage secure authentication and authorization across the platform.

American Airlines | *September 2017 – September 2023* | **Senior Web Developer / Team Lead**

- Served as Team Lead and Lead Developer for a high-priority, greenfield Applicant Tracking System (ATS), providing daily administrative direction, assigning work, and communicating project statuses to senior leadership.

- Managed and developed a team of software engineers, conducting regular 1-on-1s, delivering performance reviews, and providing ongoing mentorship to support professional growth.
- Established and managed team goals and objectives, tracking KPIs such as story points per sprint, deployments per week, and other Agile KPI's to ensure continuous improvement and efficient delivery.
- Partnered with project managers and business stakeholders to develop long-term tactical plans and make strategic project-level decisions for future feature rollouts.
- Created, maintained, and rigorously tested Disaster Recovery (DR) and business continuity plans, successfully executing these plans during three live business-critical events to ensure maximum system uptime.
- Ensured strict compliance with PII security protocols when leading the development and update of CWA/IBT and TWU union websites, managing sensitive user data in accordance with newly signed collective bargaining agreements.
- Led the migration of legacy on-premise applications to the Azure Cloud, utilizing Azure App Services, SQL Managed Instances, and Azure Data Factories to modernize infrastructure.
- Managed authentication and authorization security for API endpoints using PingFederate and JWT tokens.
- Conducted over 30 technical interviews and made final hiring decisions for 8 new developers, successfully scaling the development team to meet organizational priorities.
- Designed and maintained complex MS SQL 2016 databases, creating stored procedures, triggers, and views to automate critical business processes, including the American Airlines Drug and Alcohol testing random selection program.

MWA Intelligence | October 2015 – September 2017 | Director of Technical Support

- Built and managed a highly effective technical support team of 7 employees dedicated to resolving production issues for fourteen enterprise clients.
- Established departmental objectives and conducted regular 1-on-1s, utilizing customized metrics and KPIs to measure individual performance and drive continuous improvement.
- Architected a revenue recognition module for SAP Business One to accurately analyze deferred revenue for multi-million-dollar corporations using SQL Stored Procedures.
- Created hundreds of custom reports and views to streamline business processes, facilitating smooth client transitions to new ERP software.
- Partnered with the implementation team for SAP Business One SMB ERP systems, managing system configuration, feature creation, and end-user training.

Education

Boston University 2017-2019
MS, Computer Information Systems
 Emphasis: Data Analytics

Skills

Hard Skills:

C#
 .NET Core
 .NET Framework
 Microsoft SQL Server
 React.js 18
 GraphQL
 Microsoft Azure
 Azure DevOps
 GitHub

Jira
 Database Design

Entity Framework
 R
 Data Analytics
 Unit Testing (XUnit, Moq, NSubstitute)
 Disaster Recovery (DR) Planning & Testing
 PII Information Security
 SOX Compliance
 SDLC Governance
 Architecture Review

Arizona State University 2009-2015
BS, Accounting
 Minor: Asian Languages - Chinese

Soft Skills:

Leadership
 People Management
 Project Management
 Agile
 Requirements Gathering
 Tactical Planning
 Mentoring
 Customer Service
 Production Support
 Interviewing
 Microsoft Office
 Business Analytic
