## PROFILE

Senior software engineer and technical leader with more than a decade of experience building, modernizing, and supporting data-heavy business software. I lead teams and work across C# 14/.NET 10 applications, SQL Server 2012+, React and Angular interfaces, Azure integrations, and the requirements that turn business needs into reliable systems.

## CORE EXPERTISE

|                                                                                                                                                             |                                                                                                                                |                                                                                                                                                |

## EXPERIENCE

### PrismHR | Senior Software Engineer

September 2023 - Present | Multi-tenant Talent Management and Workforce Management applications and integrations with PrismHR HCM and PEO Core

- Build features and resolve defects in multi-tenant PrismHR Talent Management using C# 14 and .NET 10 with layered contract, repository, provider, and API controller architecture.
- Design SQL Server queries, stored procedures, tables, functions, and indexes using Dapper and Entity Framework Core, including query optimization, refactoring, and major data cleanup.
- Led the integration of Talent Management onboarding with PrismOne ID single sign-on.
- Configure Duende IdentityServer clients and scopes for secure authentication and authorization.
- Engineer integrations connecting Workforce Management with HCM, Talent Management with HCM, and Talent Management with PrismHR PEO Core using Azure Service Bus, Azure Functions, RabbitMQ, and C# webhooks.
- Test application behavior with xUnit, Moq, NSubstitute, Bruno API collections, and Playwright browser automation.
- Use Azure DevOps and Jira for backlog refinement, estimation, sprint planning, and delivery tracking.
- Use GitHub Copilot, Claude Code, and ChatGPT Codex with prompt engineering, agents, hooks, skills, and task-based workflows to accelerate development and improve delivery.
- Deliver Angular and TypeScript bug fixes and focused interface improvements alongside backend work.
- Build Talent Management and Workforce Management features under strict PII information-security requirements for sensitive HCM data.
- Collaborate with enterprise architects and technical leads to align features with established SDLC and architecture standards.
- Help modernize legacy Workforce Management projects from .NET Framework 4 to .NET 8 using Entity Framework Core, dependency injection, and contemporary data-access patterns.
- Apply factory, unit-of-work, and repository patterns to keep services testable and maintainable across legacy and modernized codebases.

## EXPERIENCE CONTINUED

### American Airlines | Senior Web Developer / Team Lead

September 2017 - September 2023 | Enterprise recruiting, union, and operations applications

- Served as team lead and lead developer for a high-priority, greenfield applicant-tracking system built with React, ASP.NET, and SQL Server, from initial design through production deployment; assigned work and reported status to senior leadership.
- Managed software engineers through regular one-on-ones, performance reviews, and ongoing mentorship.
- Set team objectives and tracked KPIs including story points per sprint and deployments per week.
- Partnered with project managers and business stakeholders on long-term tactical plans and strategic feature-rollout decisions.
- Created and rigorously tested disaster-recovery and business-continuity plans used during three live business-critical events to maximize uptime.
- Led CWA/IBT and TWU union-site development under strict PII-security requirements for sensitive user data and new collective bargaining agreements.
- Migrated three legacy applications to Azure App Service, SQL Managed Instance, and Azure Data Factory.
- Managed API authentication and authorization with PingFederate and JWT tokens.
- Conducted more than 30 technical interviews and made final hiring decisions for eight developers, scaling the team to meet organizational priorities.
- Designed and maintained SQL Server 2016 databases, stored procedures, triggers, and views, including the American Airlines drug-and-alcohol-testing random-selection program.
- Supported production applications built with C#, VB.NET, Blazor, Web Forms, and MVC on the Employee Shared Technology team.

## EARLIER EXPERIENCE

### MWA Intelligence | Director of Technical Support

October 2015 - September 2017 | ERP implementation, SQL reporting, production support, and people leadership

- Built and managed a seven-person technical-support team serving fourteen enterprise clients; set departmental objectives and used one-on-ones, performance metrics, and KPIs to drive improvement.
- Created hundreds of SQL reports and views that streamlined business processes and supported client transitions to new ERP software.
- Architected a SAP Business One revenue-recognition module using SQL stored procedures to analyze deferred revenue for multi-million-dollar corporations.
- Partnered with the SAP Business One implementation team on system configuration, feature creation, and end-user training.
- Established repeatable support practices that improved case ownership and service visibility across the client portfolio.
